

Wall Hangings

Vanda offers a further method of solving the problem of how to tastefully display wall hangings using the versatile Vanda Versatrak.

Vanda "T" Section

Designed for reasonably lightweight materials, the wall hanging is attached to the "T" section by way of Velcro type products applied to the flat section of the "T" bar, and the rear of the wall hanging. The "T" bar then simply slides into the channel of the Versatrak rod. The Wall hanging is then held nicely taut by the Velcro, but is still easy to remove for cleaning.

Alligator Clips

Used in conjunction with either Versatrak rings or glides, Alligator clips from Vanda can be used to display hanging material. Particularly useful when the material is to be changed frequently
